## Course Highlights

### **The Foundation of Vision Therapy Offers:**

- The new therapist an understanding of the visual process and provides a basic understanding of VT.
- The experienced therapist the opportunity to refresh their knowledge of VT and develop confidence.
- The opportunity for the therapist to gain the background knowledge and confidence to become a participating member of the optometric care team.
- Therapists the opportunity to learn to perform ancillary patient testing under the direction of their optometrist.
- Therapists the ability to learn to guide the patient through vision therapy procedures prescribed by the optometrists for visual skills, Learning Related Vision Problems, Strabismus and Amblyopia.
- Therapists the opportunity to learn when to refer patient questions to the optometrist, how to maintain patient confidentiality, and how to communicate effectively and accurately within the office and with the public about optometric vision therapy.

***Our highly interactive, small group presentations offer therapists the hands-on experience they need to give them the confidence they desire.***

- What is vision
- Optometric Terminology
- Structure and Function of Vision
- Anatomy/physiology of the visual process
- Human Development
- Development of Visual Conditions
