For additional educational opportunities please contact:
karen.ruder@oep.org

Cancellation policy

A non-refundable fee of 25% of registration fees if cancelled within 30 days of course.

Course Description/Highlights

This course supplements the core Visual Dysfunctions course with testing and therapy activities to diagnose and treat patients with strabismus and amblyopia.

For whatever reasons, strabismus and amblyopia have a reputation for being difficult to understand and treat.

The Clinical Curriculum approach stems from the understanding of Chaos and Complexity Theory which states, "That which appears to be complex, most often can be explained very simply. That which appears so simple, most often is actually very complex." You will learn how specific disruptions occurring at critical times in normal infant development can result in strabismus or amblyopia.

How and why do amblyopia and strabismus develop?

What percentage of strabismus and amblyopia are functionally related?

How can the development of amblyopia or strabismus be beneficial to the person at a specified point in time and why is this behavior not beneficial in the long run?

Once the mechanism of the development of strabismus and amblyopia is understood, treating the conditions is easier.

Supplemental testing will be discussed in reference to gaining insights into the behaviors of strabismics and amblyopes.

Among these tests are the following:

- Contrast Sensitivity
- 2.0X Telescope
- Pinhole VA
- Single Letter vs. Whole Line VA
- Bagolini Striated Lenses
- Visual Evoked Potentials (VEP)
- Optikokinetic Nystagmus

(continued overleaf)

Course Description/Highlights

(continued)

- Vestibular Ocular Reflexes
- Parks Three Step
- Brock Posture Board
- Special Considerations of the Cover Test

The following will be covered in depth:

- The terms eccentric fixation, anomalous retinal correspondence, suppression, eccentric viewing
- The myth of critical periods
- A different way of using reduced plus lenses for the treatment of strabismus
- Bill Ludlum's procedures for reducing vertical tropias
- Israel Greenwald's over-correcting prisms
- Twenty-three additional vision therapy procedures, many from Drs. Kraskin, Ludlum, Greenwald and other master "strabismologists"

This course gives you the confidence, skills and knowledge needed to start successfully treating amblyopia and strabismus cases immediately upon your return to your office.

VT/Strabismus & Amblyopia
