(1 1/2 hour lunch break)
Lunch and coffee breaks will be provided
Attendance at this seminar is limited. Early registration is recommended.

Cancellation policy
A non-refundable fee of 25% of registration fees if cancelled within two weeks of RCS.
The years before going to school are critical to school readiness. This preparation for school and later performance begins at birth. Vision is a critical part of this process of development. Inadequate vision development creates a significant ripple effect in integration of other senses that lead to limitations in all areas of life.

Without appropriate guidance, a child may develop patterns of action and behaviors that are inappropriate for later performance in school activities and learning as well as sports and life in general. Optometric management should include appropriate guidance in the aspects of vision related to overall development. This seminar will guide you in the observations, evaluation, assessment, and basic management of vision during these critical stages of development.

“Vision Development from Birth to School” will give the attendee an opportunity to observe Dr. Steele evaluating infants, toddlers and young pre-school children. Dr. Steele will demonstrate his “JUST LOOK” retinoscopy technique for patients of all ages. Attendees will also have the opportunity to evaluate the children under Dr. Steele’s careful observation.

BRING your retinoscope to this valuable seminar.
