Early registration is recommended.

Cancellation policy

A non-refundable fee of 25% of registration fees
if cancelled within two weeks of RCS.

Lecturer

Caroline M. F. Hurst BSc, FCOptom, FBABO

Caroline M. F. Hurst BSc FCOptom FBABO is a full time optometrist working in private practice in partnership with her husband, Alan Hurst – C&A Hurst Opticians, Cambridgeshire, England. She has practiced behavioral optometry since 1997.

She graduated with 2.1 honors degree from Bradford University Ophthalmic Optics Course, in 1977. In 1978 she completed professional examinations for the BOA, SMC and

Scottish AO. These bodies were combined to become the British College of Optometrists in 1980, with the suffix FCOptom for Founding Fellows. Ms. Hurst is currently the Chair of the British Association of Behavioural Optometrists (BABO). She earned her BABO Fellowship in April 2007 on the first occasion the Fellowship programme was completed. She served as a volunteer with the Opening Eyes program of the Special Olympics in National Games Cardiff 2001, and Glasgow in 2005, and World Games in Dublin in 2003. Recently Ms. Hurst has been appointed as Clinical Director for the Special Olympics GB Opening Eyes programme and led the screening at the GB National Games in Leicester in July 2009. She has been published in Ophthalmic and Physiological Optics, "Improvements in performance following optometric vision therapy in a child with dyspraxia" and in Behavioural Optometry, "The Hurst Model of Vision Balances."

Motor Training within Optometric Vision Therapy

Movement, the visual process and the development of processing/ perceptual skills are intrinsically linked. They are in a dynamic, continuous and cyclical relationship. This RCS presentation will describe the impact of infantile reflexes and primary movement patterns upon the development of the visual process. It will provide an organized approach to testing and therapy activities.

This RCS will explore the development and learning of gross and fine motor skill together with primitive and postural reflexes in the control of movements and posture. It will include the descriptions, actions and effects of visually relevant primitive reflexes. Assessments and therapy activities to improve the efficiency of movements, processing skills and therefore the visual process will be explored.

NEW!! The new third day of this RCS will consider the testing and OVT approach to young children, patients with developmental delay, and some ABI patients. We shall consider the appropriate OVT for both chronological and developmental age. There will be many new activities and discussions on downloading activities already known.

More than half of the course is practical floor work. You will be in pairs, in a room large enough for all to be moving on the floor at once. So wear comfortable, on the floor clothing, and get ready to experience!
